## ENGINEERING SERVICES

Aiken Group's Engineering Services include full turnkey packages and best in practice solutions for engineering and project management in support of drilling, production, marine and manufacturing facilities.

- Drilling facilities engineering
- New build packages
- Mobile drilling units and production platform engineering support
- Specialist drilling equipment packages
- Life-of-field engineering, designing and implementing modification projects onshore and offshore
- Integrated topsides support for drilling upgrades and modifications
- Front-end engineering and design (FEED)
- Detailed design
- Engineering, procurement and construction (EPC)
- Decommissioning projects and studies

Disciplines include electrical, instrumentation, structural, naval architecture, piping, drilling systems and processes, and project management.

Services from a single engineer to a full team are provided to a number of customers on a call-off basis through technical support agreements, and to others on an ad-hoc basis to enhance their own in-house resources.

The Aiken Group engineering team, working closely with procurement and construction staff, has a key role in the integrated approach, including front-end engineering design.
